Education

Central Michigan University Aug. 2024 - May 2026
Master of Science in Information Systems, GPA 3.64 *Mount Pleasant, MI*

Babcock University Sep. 2019 - Jul. 2023
Bachelor of Science in Computer Science, GPA 3.72

Experience

Integration Analyst, Systems Developer Technical Consultant Jan. 2022 - Jul. 2024
Metrosoft Ltd

- Built Python/SQL backend services and REST APIs for 5+ production clients, integrating 10+ third-party systems with error handling, input validation, and retry logic
- Cut application response times by 30% across 3 product lines by profiling and optimizing MySQL queries and service workflows
- Resolved complex issues across 5+ client environments through root-cause analysis and documented fixes, restoring system reliability
- Authored 20+ technical documents (API specs, UAT test cases, defect reports, user guides) and supported go-live and upgrade cycles

Projects

Ticket Triage Service: Text Classification and Article Search | *Python, scikit-learn, FastAPI, Docker, GitHub Actions*

- Built a FastAPI service that classifies IT help desk tickets into six categories and suggests the best-matching knowledge-base article, packaged as a Docker image that a GitHub Actions pipeline builds and publishes
- Trained a TF-IDF and logistic regression model on 720 synthetic tickets and tested it on 48 separate hand-written tickets: 87.5% accuracy, against 99.9% on the synthetic data, with every error documented
- Wrote 11 automated tests and confirmed training is reproducible: the pipeline run matched an earlier run exactly

Purchase-to-Pay Process Mining and Early Warning | *Python, PM4Py, pandas*

- Analyzed a simulated 20,000-case purchase-to-pay log, found the main delay (goods receipt to invoice receipt, 14.5 days mean wait), and built an alert rule learned on 70% of cases and scored on a 30% holdout: 98% recall, 31% precision, 3.2x lift

Cloud Pipeline: Docker, GitHub Actions, and Terraform | *Docker, GitHub Actions, Terraform, Flask*

- Built a pipeline that tests a Flask app, validates Terraform, and publishes a container image; wrote Terraform for an AWS VPC and web server, validated in the pipeline

Additional Projects

- UiPath and Python invoice validation bot (200 synthetic invoices, 26 of 26 injected errors caught); scheduled port-scan alerts with GitHub Actions; TOTP/MFA authentication system

Certifications

AI and Cloud: Oracle OCI Foundations, Agentic AI Foundations, and Fusion AI Agent Studio Foundations (Associate); Anthropic Academy AI Fluency
Business and Process: IBM Business Analyst Professional Certificate; SAP Technology Consultant Professional Certificate; Celonis Process Mining Rising Star; ERPsim business simulation, 3rd place
IT and Security: Google IT Support Professional Certificate; ISC2 Certified in Cybersecurity (CC)

Technical Skills

Machine Learning and Data: Python, scikit-learn, pandas, NumPy, text classification (TF-IDF, logistic regression), model evaluation (precision, recall, confusion matrix, holdout sets), process mining (PM4Py)
Engineering: FastAPI, Flask, REST APIs, Docker, GitHub Actions, Terraform, Git, SQL, MySQL, Bash, Linux
Spoken Languages: English, Yoruba, Japanese
