Education

Central Michigan University Aug. 2024 - May 2026
Master of Science in Information Systems, GPA 3.64 *Mount Pleasant, MI*

Babcock University Sep. 2019 - Jul. 2023
Bachelor of Science in Computer Science, GPA 3.72

Experience

Integration Analyst, Systems Developer Technical Consultant Jan. 2022 - Jul. 2024
Metrosoft Ltd

- Built Python/SQL backend services and REST APIs for 5+ production clients, integrating 10+ third-party systems with error handling, input validation, and retry logic
- Resolved complex issues across 5+ client environments through root-cause analysis and documented fixes, restoring system reliability
- Cut application response times by 30% across 3 product lines by profiling and optimizing MySQL queries and service workflows
- Authored 20+ technical documents (API specs, UAT test cases, defect reports, user guides) and supported go-live and upgrade cycles

Projects

Homelab: Linux Servers and Windows Active Directory | *VirtualBox, Ubuntu Server, Windows Server 2022, PowerShell*

- Built a virtual lab with two Ubuntu Server 24.04 servers, a Windows Server 2022 domain controller (kslab.local), and a domain-joined Windows 10 Pro workstation on an isolated network with static addressing
- Hardened SSH (key-only login, root login disabled, MaxAuthTries 3), created users and groups, and wrote a least-privilege sudo rule validated with visudo before installation
- Delegated password-reset rights to a help desk group in Active Directory with dsacls; verified that a standard help desk user could reset another user's password and was denied on the built-in Administrator account
- Wrote four knowledge-base articles (password reset, onboarding and offboarding, SSH troubleshooting, delegated domain reset) and recovered VMs from boot and permission failures using logs and console screenshots

Ansible Baseline for Lab Servers | *Ansible, YAML, Ubuntu Server*

- Wrote an Ansible playbook that configures two Ubuntu servers identically (packages, users and groups, SSH hardening, validated sudo rule); a repeat run reported no changes, and a deliberately removed sudo rule was detected and restored

Monitoring Homelab: Prometheus and Grafana | *Prometheus, Grafana, Docker, Ansible*

- Deployed Prometheus and Grafana in Docker to monitor two Ubuntu servers, with node_exporter installed by an Ansible playbook; wrote server-down, CPU, and disk alert rules and tested the server-down alert with a planned outage
- Wrote a runbook and a mock postmortem with a timeline, a 29-minute recovery, and follow-up actions

Scheduled Port Scan with Change Alerts | *Python, nmap, GitHub Actions*

- Runs nmap daily through GitHub Actions, compares open ports with a saved baseline, and opens a GitHub issue only for new open ports; validated in a live run, with 6 unit tests before every scan

Manual AWS Infrastructure Lab | *AWS, Docker, Flask*

- Hand-built an AWS VPC (custom CIDR, subnets, route tables, internet gateway), then containerized and deployed a Flask app with Docker behind configured security group rules

Additional Projects

- Python/Nmap vulnerability scanner; TOTP/MFA authentication system (NIST-aligned); penetration testing and digital forensics labs; UiPath invoice bot

Certifications

IT and Security: Google IT Support Professional Certificate; ISC2 Certified in Cybersecurity (CC); FEMA IS-100.c, IS-200.c, IS-700.b, IS-800.d
Cloud and Business: Oracle OCI Foundations, Agentic AI Foundations, and Fusion AI Agent Studio Foundations (Associate); IBM Business Analyst Professional Certificate; SAP Technology Consultant Professional Certificate; Celonis Process Mining Rising Star; ERPsim business simulation, 3rd place
Automation: UiPath Automation Developer Associate Training (diploma of completion); Anthropic Academy AI Fluency

Technical Skills

Linux and Systems: Ubuntu Server 24.04, Bash, Ansible, Prometheus, Grafana, SSH hardening, netplan, sudo and users and groups, LVM, systemd, VM snapshots and recovery, Windows Server and Active Directory, PowerShell
Languages and Tools: Python, SQL, MySQL, Git, GitHub Actions, Docker, AWS (EC2, VPC), Flask, REST APIs, Nmap, Wireshark
Spoken Languages: English, Yoruba, Japanese
